

DT-311J Stroboscope

DT-311J NEMA 4X Stroboscope for Harsh Wet Work Areas

Where powerful illumination and rugged speed measuring accuracy is required for the textile industry, the DT-311J will perform where other stroboscopes will not. The DT-311J is used to set injection timing, injection pressure, timing of shedding and weft running time of weaving machinery. Units combine rugged NEMA 4X (IP65) housing with high performance accuracy, special phase shifting, with shock absorbing components and top mounted handle, allows the equipment operator maximum flexibility when setting the timing of weaving machinery.

LED Operation

MODE

Internal Signal "MODE" (Flash)

or External Trigger Control Allows manual control and display of flash rate per minute (FPM), deg (flash delay angle in degrees), or automatically synchronizes to an external input signal

LAMP

Flash Lamp On/Off Switch

DIV

Angle division "DIV"

Permits special flash interval ratio settings: 1/1, 1/2, 1/3, 1/4, and 2/4 flashes per rotation

ZERO

"ZERO" Setting Control

Easy, single touch re-zeroing at any angle

SHIFT

Phase "SHIFT"

Single touch - changes flash timing, 0-359 degrees
